DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Andrew Neely on Nov. 8, 2004.

The application has been amended as follows:

Cancel claims 1-10 and 18-22.

In claim 15, replace line 1-11 with:

Claim 15. (currently amended) An alignment system for aligning a centerline of a first shaft with a centerline of a second shaft comprising:

an analyzer having memory,

a mounting bracket having engagement surfaces for engaging, the first shaft and
securing the bracket to the first shy

a sensor head having a facing surface and a rear surface in opposing relation
disposed on the mounting bracket and extending in a substantial perpendicular
orientation with respect to the centerline of the first shaft,

a collimated light source mounted on the sensor head for transmitting a beam of
energy in a direction that is substantially parallel to the first shaft,

a photosensitive sensor mounted on the sensor head for sensing light and generating a position signal corresponding to a position of a light beam impinging upon the photosensitive sensor,

Remarks: Claim 15 reflects the changes on 1-8-2004.

Claims 1-10 and 18-22 are cancelled. Claims 1-10 and 18-22 are non-elected invention.

Allowable Subject Matter

2. Claims 11-17, 23 and 24 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

Independent claims 11, 12, 15 and 24 contain allowable subject matter. None of the prior art of record shows or fairly suggests the claimed invention.

Regarding claims 11, 12, 15:

The primary reason for the allowance of claims 11, 12 and 15 are the inclusion of an alignment a centerline of a first shaft with a centerline of a second shaft including a collimated light source mounted on the sensor head for transmitting a beam of energy in a direction that is substantially parallel to the first shaft. It is these features found in the claim, as they are claimed in the combination, that

has not been found, taught or suggested by the prior art of record which makes this claim allowable over the prior art.

Claims 13 and 14 are allowed due to their dependency on claim 12.

Claims 16, 17 and 23 are allowed due to their dependency on claim 15.

Regarding claim 24:

The primary reason for the allowance of claim 24 is the inclusion of an alignment including a second dual-axis accelerometer having a third sensing axis for sensing a third acceleration component and a fourth sense axis for sense a fourth acceleration component wherein the third and fourth sense axes are in substantially perpendicular relation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
